ANALOG DEVICES

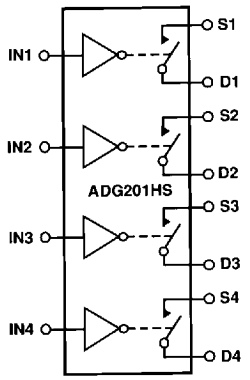
LC²MOS
High Speed, Quad SPST Switch

ADG201HS

FEATURES

50ns max Switching Time Over Full Temperature Range
Low R_{ON} (30Ω typ)
Single Supply Specifications for +10.8V to +16.5V Operation
Extended Plastic Temperature Range (−40°C to +85°C)
Break-Before-Make Switching
Low Leakage (100pA typ)
44V Supply max Rating
Available in 16-Lead DIP/SOIC and 20-Lead LCCC/PLCC Packages
ADG201HS (K, B, T) Replaces HI-201HS
ADG201HS (J, A, S) Replaces DG271

FUNCTIONAL BLOCK DIAGRAM



GENERAL DESCRIPTION

The ADG201HS is a monolithic CMOS device comprising four independently selectable SPST switches. It is designed on an enhanced LC²MOS process which gives very fast switching speeds and low R_{ON}.

The switches also feature break-before-make switching action for use in multiplexer applications and low charge injection for minimum transients on the output when switching the digital inputs.

ORDERING GUIDE

Model[1]	Temperature Range	Package Option[2]
ADG201HSJN	−40°C to +85°C	N-16
ADG201HSKN	−40°C to +85°C	N-16
ADG201HSKR	−40°C to +85°C	R-16
ADG201HSAQ	−40°C to +85°C	Q-16
ADG201HSBQ	−40°C to +85°C	Q-16
ADG201HSJP	−40°C to +85°C	P-20A
ADG201HSKP	−40°C to +85°C	P-20A
ADG201HSSQ	−55°C to +125°C	Q-16
ADG201HSTQ[3]	−55°C to +125°C	Q-16
ADG201HSTE[3]	−55°C to +125°C	E-20A

NOTES
[1]To order MIL-STD-883, Class B processed parts, add /883B to T grade part numbers. See the Analog Devices Military Products Databook (1994) for military data sheet.
[2]E = Leadless Ceramic Chip Carrier; N = Narrow Plastic DIP; P = Plastic Leaded Chip Carrier; Q = Cerdip; R = 0.15" Small Outline IC (SOIC).
[3]Standard Military Drawing (SMD) approved by DESC. SMD numbers are
5962-86716012X (ADG201HSTE/883B)
5962-8671601EX (ADG201HSTQ/883B)

PRODUCT HIGHLIGHTS

1. 50ns max t_{ON} and t_{OFF}:
The ADG201HS top grades (K, B, T) have guaranteed 50ns max turn-on and turn-off times over the full operating temperature range. The lower grades (J,A,S) have guaranteed 75ns switching times over the full operating temperature range.
2. Single Supply Specifications:
The ADG201HS is fully specified for applications which require a single positive power supply in the +10.8V to +16.5V range.
3. Low Leakage:
Leakage currents in the range of 100pA make these switches suitable for high precision circuits. The added feature of break-before-make allows for multiple outputs to be tied together for multiplexer applications while keeping leakage errors to a minimum.

IN	Switch Condition
0	ON
1	OFF

NOTE

[1]The leakage specifications degrade marginally (typically 1nA at 25°C) with V_D (V_S) = V_{SS}.

Specifications subject to change without notice.

ABSOLUTE MAXIMUM RATINGS*

(T_A = 25°C unless otherwise noted)

V_{DD} to V_{SS} 44V
V_{DD} to GND . . . . . −0.3V, 25V
V_{SS} to GND[1] . . . . . +0.3V, −25V
Analog Inputs[2]
Voltage at S, D . . . . . V_{SS} −2V to V_{DD} +2V or 20mA, Whichever Occurs First
Continuous Current, S or D 20mA
Pulsed Current S or D
1ms Duration, 10% Duty Cycle 70mA
Digital Inputs[2]
Voltage at IN . . . . . V_{SS} −4V to V_{DD} +4V or 20mA, Whichever Occurs First

Power Dissipation (Any Package)
Up to +75°C 470mW
Derates above +75°C by . . . . . 6mW/°C
Operating Temperature
Commerical (J, K Version) . . . . . −40°C to +85°C
Industrial (A, B Version) . . . . . −40°C to +85°C
Extended (S, T Version) . . . . . −55°C to +125°C
Storage Temperature Range . . . . . −65°C to +150°C
Lead Temperature (Soldering 10sec) . . . . . +300°C

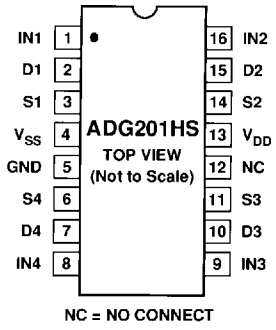
NOTES
[1]If V_{SS} is open circuited with V_{DD} and GND applied, the V_{SS} pin will be pulled positive, exceeding the Absolute Maximum Ratings. If this possibility exists, a Schottky diode from V_{SS} to GND (cathode end to GND) ensures that the Absolute Maximum Ratings will be observed.
[2]Overvoltage at IN, S or D, will be clamped by diodes. Current should be limited to the maximum rating above.

*COMMENT: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION:
ESD (electrostatic discharge) sensitive device. The digital control inputs are diode protected; however, permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. The protective foam should be discharged to the destination socket before devices are inserted.

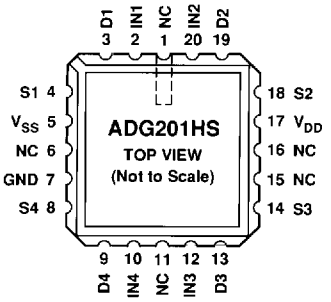
PIN CONFIGURATIONS

DIP, SOIC



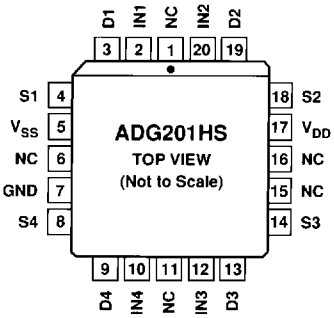
NC = NO CONNECT

LCCC



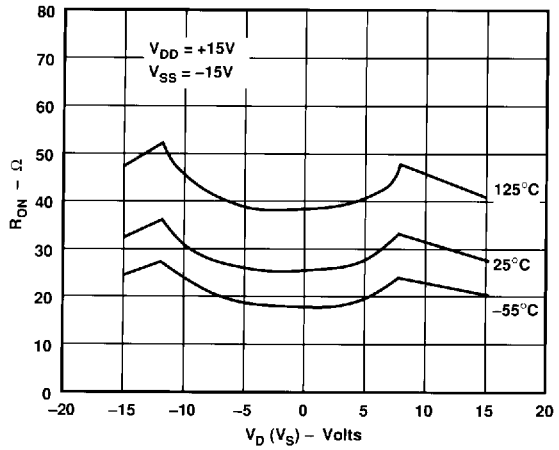
NC = NO CONNECT

PLCC

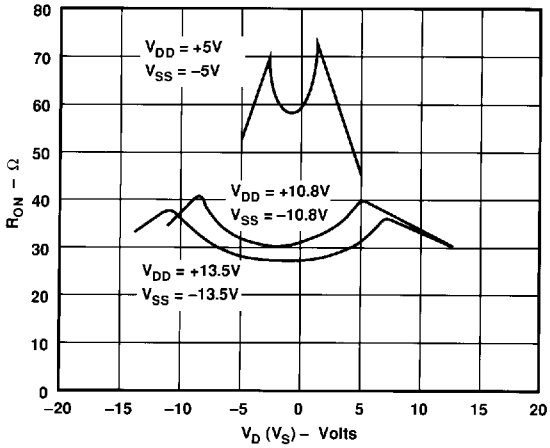


NC = NO CONNECT

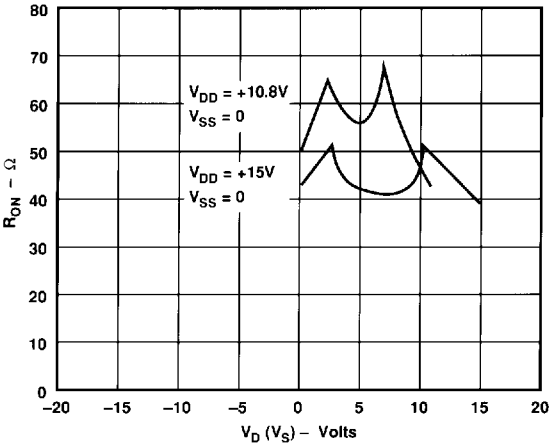
The switches are guaranteed functional with reduced single or dual supplies down to 4.5V.



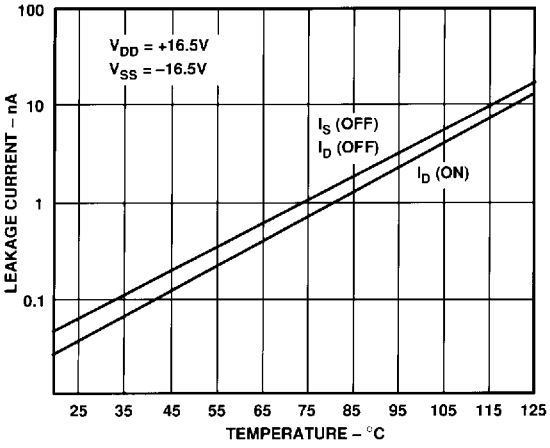
R_{ON} as a Function of V_D (V_S): Dual Supply Voltage



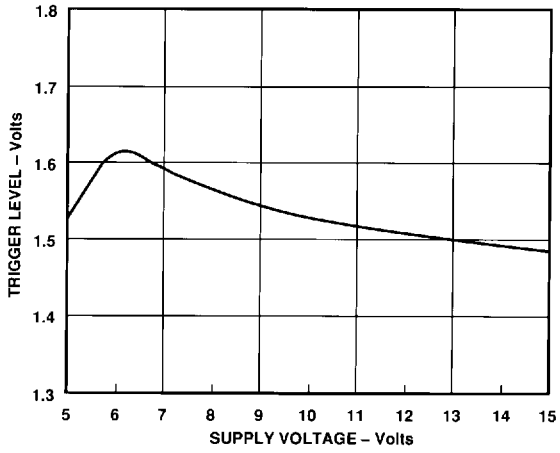
R_{ON} as a Function of V_D (V_S): Dual Supply Voltage, T_A = +25°C



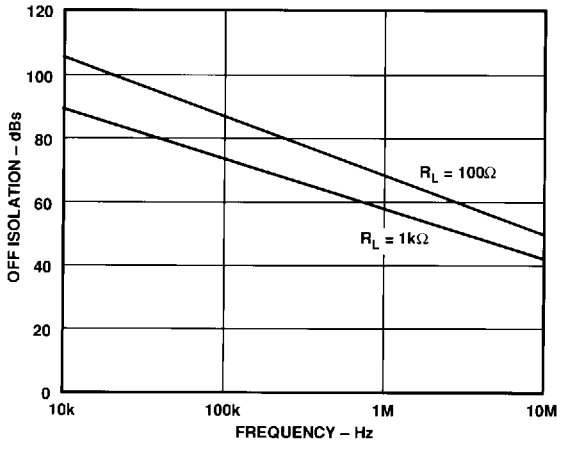
R_{ON} as a Function of V_D (V_S): Single Supply Voltage, T_A = +25°C



Leakage Current as a Function of Temperature Dual Supply Voltage. (Note: Leakage Currents Reduce as the Supply Voltages Reduce)

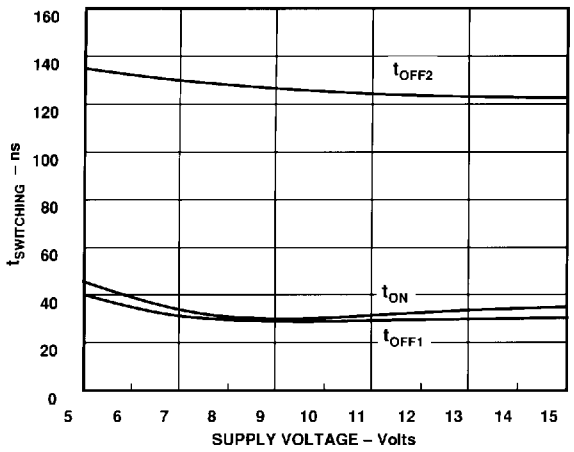


Trigger Levels vs. Power Supply Voltage, Dual or Single Supply, T_A = +25°C

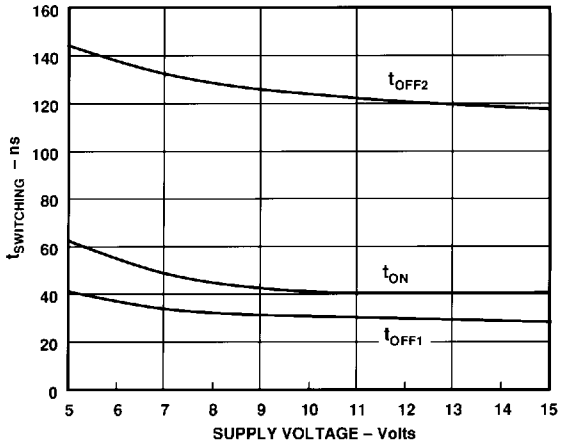


Off Isolation vs. Signal Frequency; Dual or Single 15V Supplies, T_A = +25°C

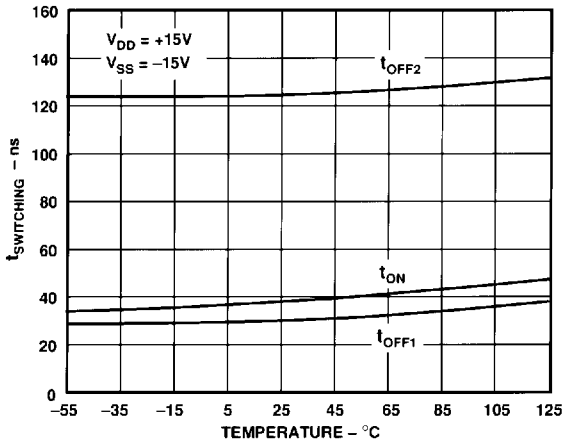
ADG201HS—Typical Performance Characteristics (Continued)



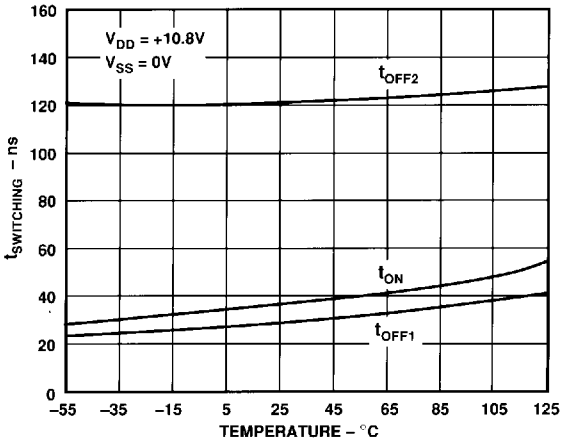
Switching Time vs. Supply Voltage (Dual Supply): T_A = +25°C. (Note: See Test Circuit 4. For V_{DD} <10V, V_S = V_{DD})



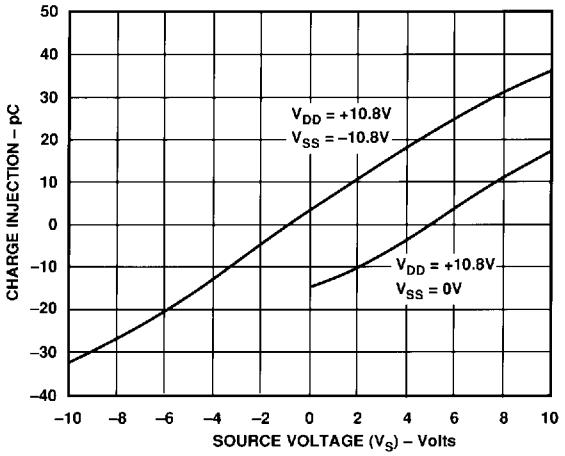
Switching Time vs. Supply Voltage (Single Supply): T_A = +25°C. (Note: See Test Circuit 4. For V_{DD} <10V, V_S = V_{DD})



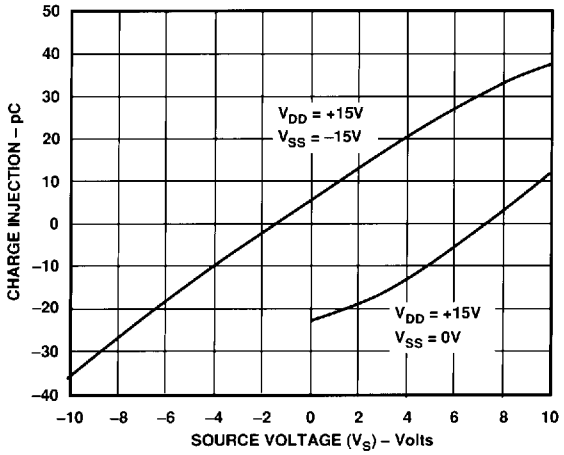
Switching Time vs. Temperature: Dual Supply Voltage



Switching Time vs. Temperature: Single Supply Voltage



Charge Injection vs. Source Voltage (V_S) for Dual and Single 10.8V Supplies: T_A = +25°C



Charge Injection vs. Source Voltage (V_S) for Dual and Single 15V Supplies: T_A = +25°C

Note: All digital input signal rise and fall times measured from 10% to 90% of 3V. $t_R = t_F = 5ns$. Decoupling capacitors (0.01μF min) from V_{DD} and V_{SS} to GND are recommended to achieve specified performance.

SINGLE SUPPLY DISK DRIVE APPLICATION

The excellent performance of the ADG201HS with single supply operation makes it suitable in applications such as disk drives where only positive power supply voltages are normally available. The accompanying circuit shows a typical application for the ADG201HS in the read/write head switching section of a disk drive. The circuit allows data (0s and 1s) to be written to and read from a disk. The principal advantage offered by the ADG201HS is that it retains very fast switching speed with single supply operation (see Single Supply Specifications). This allows disk drives to run at higher data rates.
